Progress Notes by Melissa Applegate, NP at 9/6/2026 7:04 PM

Critical Care Intervention/update note:

Brief HPI:

66F admitted with Cardiogenic Shock in the s/o severe RV failure and severe TR. Patient started on Epi and Lasix infusion per Cardiology.
Initial lactate 5.7

Repeat lactate now 4.3. UOP 50 then 75ml/hr the last 2 hours. Epi currently at 5mcg and Lasix at 10mg/hr.

Patient resting in hospital bed appearing in no acute distress.

Cardiology attending, Dr Pamulapati, made aware of repeat lactate. Given downtrending lactate will not call code shock call and continue medical management.

Plan:

- continue Epi and Lasix infusion
- closely monitor UOP
- repeat lactate at MN
- if worsening will notify Cardiology attending and further discuss goals of care

Case discussed with Dr Aljishi and Dr Pamulapati

Plan of care discussed with primary RN

CCT: 20 minutes

Lab Results

Component	Value	Date
WBC	4.20	09/06/2026
HGB	7.3 (L)	09/06/2026
HCT	24 (L)	09/06/2026
MCV	77 (L)	09/06/2026
PLT	396	09/06/2026

Lab Results

Component	Value	Date
GLUCOSE	174 (H)	09/06/2026
