Plan of Care

Signed Sep 7, 2026

Plan of Care by Courtney J, RN at 9/7/2026 6:18 PM

Problem: Risk for Fall-Universal
Goal: Fall Prevention During Hospitalization-Universal
Outcome: Progressing

Intervention: Universal Fall Precautions Interventions-IP

Recent Flowsheet Documentation

Taken 9/7/2026 1700 by Courtney L Johnson, RN

HD IP Universal Fall Precautions Interventions:

- Call light/belongings in reach
- Bed in low position and locked
- Wheelchairs and chairs locked
- Siderails up X2
- Ensure adequate lighting
- Clutter free and spill free environment
- Educate to the purpose of universal fall precautions
- Educate to call for assistance
- Keep closet and bathroom doors closed when not in use
- Use of footwear (See row information)

Problem: Chronic Kidney Disease
Goal: Maintain best kidney function
Outcome: Progressing

Goal: Educate about Dialysis
Outcome: Progressing

Goal: Educate about nutrition for renal disease
Outcome: Progressing

Goal: Educate about complications of Renal Disease
Outcome: Progressing

Problem: Cardiac: Heart Failure
Goal: Hemodynamic stability will improve by discharge
Description: Hemodynamic stability will improve by discharge
Outcome: Progressing

Goal: Cardiac arrhythmias will improve or return to baseline by discharge
Description: Cardiac arrhythmias will improve or return to baseline by discharge
Outcome: Progressing

Problem: Risk for Decreased Mobility
Goal: Patient's mobility will be maintained/improved during hospital stay
Outcome: Progressing

Goal: Mobility Care consults utilized appropriately
Outcome: Progressing

Goal: Patient mobilizes safely throughout hospitalization
Outcome: Progressing

Problem: Risk for Fall-Low-IP
Goal: Patient will remain free of falls during hospital stay-IP
Outcome: Progressing

Intervention: Universal Fall Precautions Interventions-IP

Intervention: Low Fall Precautions Interventions-IP

Recent Flowsheet Documentation

Taken 9/7/2026 1700 by Courtney L Johnson, RN

HD IP Low Fall Risk Interventions (7-10):

- Initiate universal fall precautions
- Individualize HD Falls Care Plan
- Provide patient/family education based on risk assessment using the HDS
- Instruct patient/family to call staff for assistance when getting out of bed or accessing out of reach items
- Do not leave patient unattended while toileting or in the bathroom. For rehab, follow facility toileting protocol

- Do not leave patient unattended while toileting or in the bathroom. For rehab, follow facility toileting protocol

Intervention: Medication Interventions-IP

Recent Flowsheet Documentation

Taken 9/7/2026 1700 by Courtney L Johnson, RN

HD IP Medication Interventions: Review medications daily with patient and family and educate on side effects

Problem: Knowledge Deficit

Goal: Patient/family/caregiver demonstrates understanding of disease process, treatment plan, medications, and discharge instructions

Description: Complete learning assessment and assess knowledge base.

Outcome: Progressing

Problem: Compromised Skin Integrity
Goal: Skin integrity is maintained or improved
Description: Assess and monitor skin integrity. Identify patients at risk for skin breakdown on admission and per policy. Collaborate with interdisciplinary team and initiate plans and interventions as needed.

Outcome: Progressing

Goal: Fluid and electrolyte balance are achieved/maintained
Description: Assess and monitor vital signs (orthostatic vitals if applicable), fluid intake and output, urine color, labs, skin turgor, mucous membranes, jugular venous distention, edema, circumference of edematous extremities and abdominal girth, respiratory status, and mental status. Monitor for signs and symptoms of hypovolemia (tachycardia, rapid breathing, decreased urine output, postural hypotension, confusion, syncope). Monitor for signs and symptoms of hypervolemia (strong rapid pulse, shortness of breath, difficulty breathing lying down, crackles heard in lung fields, edema). Collaborate with interdisciplinary team and initiate plan and interventions as ordered.

Outcome: Progressing

Goal: Nutritional status is improving
Description: Monitor and assess patient for malnutrition (ex- brittle hair, bruises, dry skin, pale skin and conjunctiva, muscle wasting, smooth red tongue, and disorientation). Collaborate with interdisciplinary team and initiate plan and interventions as ordered. Monitor patient's weight and dietary intake as ordered or per policy. Utilize nutrition screening tool and intervene per policy. Determine patient's food preferences and provide high-protein, high-caloric foods as appropriate.

Outcome: Progressing

Problem: Urinary Incontinence
Goal: Perineal skin integrity is maintained or improved
Description: Assess genitourinary system, perineal skin, labs (urinalysis), and history of incontinence to include past management, aggravating, and alleviating factors. Collaborate with interdisciplinary team and initiate plans and interventions as needed.

Outcome: Progressing
